Art Unit: 1723

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 is indefinite for failing to particularly point out what is the structural relationship between a first connection and a second connection and between a first connector and a second connector. Claim 1 is indefinite for failing to particularly point out whether a first connector is a connecting tube of a first storage container. Claims 8-9 are indefinite for failing to particularly point out what does a cutoff device cut off.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4 and 6-9 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 96/25214. WO 96/25214 teaches a dialysis machine comprising a preparation device including a detector device, a first connection and a second connection in a form of cap (370) connected to first and second storage containers in a form of shell (380) of a bottle (270) wherein the first connector (370) has a touch button (362) in a form of bar codes showing the contents of the bottle and a touch button reader i.e. a detector for reading information coded in the touch button (362) and passing the information to a control module (25) i.e. analyzer unit capable of comparing

Art Unit: 1723

the information from the touch button reader with stored memory of correct dialysate chemicals and activating alarm when the bottle (270) having improper chemical for the patient so that the incorrect bottle is removed (see figures 7A-10F; page 40, lines 14-23; page 42, line 18 - page 46, line 8). Note that multiple bottles (270) are placed in multiple applicators (260) in a chemical platform (250).

5. Claim 5 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References cited on PTO-892 form are the references cited in the parent applications. US Patent No. 4,895,657 and 6,017,318 teach biological fluid delivery system.
